Jakarta RESTful Web Services 3.1 Workshop Presenter

Module 5: Java SE web services client.

In this module the workshop participants will work with a desktop web service client. The project Mod_05_RestServer must first be running on GlassFish. This is the Mod_04_RestServer but with both the hello and compound interest services in place ready to be called. If the participant used something other than compound interest then they may use their Mod_04_RestServer as the target for the clients.

The Participant document is quite thorough, so you should carefully review it.
