Jakarta RESTful Web Services 3.1 Workshop Presenter

Module 6: Module 6: Servlet and Jakarta Faces RESTful Clients

In this module the participants will implement RESTful Clients in a Jakarta Servlet project and in a Jakarta Faces project. There is a lot of code reuse and so at this point in the workshop the participants should feel comfortable completing the tasks.

The participants must first run the Mod_06_RestServer on Glassfish before they can try their code. This is the host of the service these clients are accessing.
